Subject: Application to Data Engineer
Date: 19 décembre 2022

Dear Sir,

I heard about the Dataiku company via the FrenchTech platform and write you today to take part of your teams as a Software Engineer in Data Presentation in Washington D.C.

I'm interested in Economy / Finance as an amateur since a few years as well as the entrepreneurship and would like to build up a professional background in close touch with experienced leaders. During my year in the United States, I attempted to conferences and meetings with startup leaders and entrepreneurs who motivated me get involved in FinTech environment. I'm highly convinced that Data analysis can solve complex problems such as classifications / recognition problems or fitting tendencies, leading to a better comprehension of bias and ability to make predictions. Moreover I think an accurate visualization of datas often leads to a good apprehension of their meaning and makes the analysis way easier.

As Dataiku is a leader in Data visualization and Data analysis throughout Machine Learning, it represents a great carrier opportunity to me. As a Research Assistant at the University of South Florida, I got an introduction to Machine learning applied to physics that I improved it with a recent formation on Deep learning and neuronal network in Python. I'm now willing to apply it to real world.

I am motivated, curious, always in the need to learn and get out of my comfort zone. The scientific method is my way to make progress and I love working in small teams with boiling minds, ready to catch new ideas.

Looking forward to reading from you.

Best regards,

Antoine Herrmann
